Program Overview
Mason Engineering offers a Master of Science in Computer Engineering through its Department of Electrical and Computer Engineering.

Computer Engineering involves knowledge of hardware and software development. The students learn how to design new generations of personal computers, as well as embedded computing systems, such as those found in smartphones, cars, appliances, computer networks, smart factories, and the internet-of-things. The program covers the entire digital integrated circuit design process targeting Field Programmable Gate Arrays (FPGAs) and Application Specific Integrated Circuits (ASICs).

It also encompasses the complete software development process targeting microcontrollers, micro-processors, and multi-cores. It teaches students how to efficiently partition the system into software and hardware components, and develop high-performance interfaces between these two parts.

Our project-oriented courses and labs expose students to modern computer-aided design tools for hardware and software design. The students master the art of writing comprehensive technical reports and giving successful oral presentations. They study applications areas, such as cryptography, network security, digital signal and image processing, computer networks, bioengineering, and robotics. As a part of their Master’s Theses, research-oriented students can participate in externally funded projects, conducted by computer engineering research groups. The graduates of our program are very successful in finding exciting and high-paying jobs in high-tech industry, business, and government, both locally and nationwide. Some get promotions on their current jobs, others start their own companies. They are also very well prepared to continue their education toward Ph.D. degrees in computer and electrical engineering, as well as other related fields.

The MS in Computer Engineering Program offers the following specialization areas: digital systems design, microprocessor and embedded systems, digital signal processing, computer networks, and network and system security.

The Department of Electrical and Computer Engineering has an outstanding faculty of 28 full-time professors, 6 of whom are fellows of IEEE or other professional societies. The department offers more than 50 graduate-level courses in electrical and computer engineering. The program regularly consults with area employers to provide input on field trends, which leads to the offering of special topics courses designed to give our students an opportunity to earn a degree that is highly relevant in today’s environment.
Computer Engineering (M.S.)

Program Requirements
The MS in Computer Engineering requires a minimum of 30 graduate-level credits. Course work must represent a cohesive set of courses leading to comprehensive knowledge in one specialization area.

Core course options include two of the following:
- Operating Systems
- Microprocessors
- Computer Network Architectures and Protocols
- Digital System Design with VHDL
- Sequential Machine Theory

Students then take 24 credits (or 6 credits of thesis and 18 credits of courses) from the large array of course offerings in Digital Systems Design, Microprocessors, Embedded Systems, Digital Signal Processing, Computer Networks, and Network and System Security. Students may also take up to 50% of courses offered by other programs within the Volgenau School or the university with prior permission. Distance education option may be available for selected courses. Refer to our website for more information on program course offerings and details on program requirements.

Related Programs:
- Electrical Engineering, MS
- Computer Science, MS
- Digital Forensics, MS
- Telecommunications, MS
- Electrical and Computer Engineering, PhD

Admission Requirements
In addition to meeting general university admissions requirements, MS in Computer Engineering applicants must have completed a baccalaureate degree in Computer Engineering, Electrical Engineering, or a closely related discipline from an accredited program with a reputation for high academic standards and have earned an average GPA of 3.00 or better over their 60 highest-level credits.

Required application materials include:
- Online application and non-refundable fee
- Transcripts showing all post-secondary study
- Professional and Educational Goals Statement
- Two letters of recommendation from professors or senior officials at place of employment
- Self-Evaluation
- GRE scores (for applicants who have not earned at least a Bachelor's degree from a U.S. institution)
- Resume

Additional application materials, including English proficiency examination scores (e.g., TOEFL, IELTS), are required if the applicant holds a degree from an international institution and/or requires an F-1 or J-1 visa. Visit http://admissions.gmu.edu/grad/ for details.

Special admission programs are available for Volgenau School students and alumni.
